

Gable Homesheds™

REGION C

PRODUCT DETAILS

The Stratco Cyclonic (Region C) Gable Homeshed is designed with a tough galvanised and welded “C” section frame and is engineered and approved to Region C conditions. A 15° roof pitch ensures a cooler building for tropical Australia, as well as providing greater storage and headroom. Gable Homesheds feature tough Stratco Superdek® wall cladding and Corrugated roof cladding for added strength and security.

Region C storage sheds come standard with ‘single sized’ roller doors in the gable end. Multiple ‘single sized’ roller doors can be positioned on the gable end or gutter side walls for greater flexibility and shed accessibility.

Choose from a range of optional extras including gutters and downpipes in either Zinc/al or prepainted colour steel finish, a personal access door, louvre window with screen, 300mm spinning ventilator and a ventridge for maximised convection cooling. Longer garages are available by request in three metre bay sections. Create a garaport (carport) on either the front or rear gable end of the shed with the option of extending the roof in three metre open bay sections.

An installation guide for shed erection is available, or Stratco can recommend an independent qualified installer.

The Stratco Cyclonic (Region C) Gable Homeshed comes standard with a height of 3.0m and has been designed for Region C, Terrain Category 2 areas in accordance with AS/NZS 1170.2-2002.

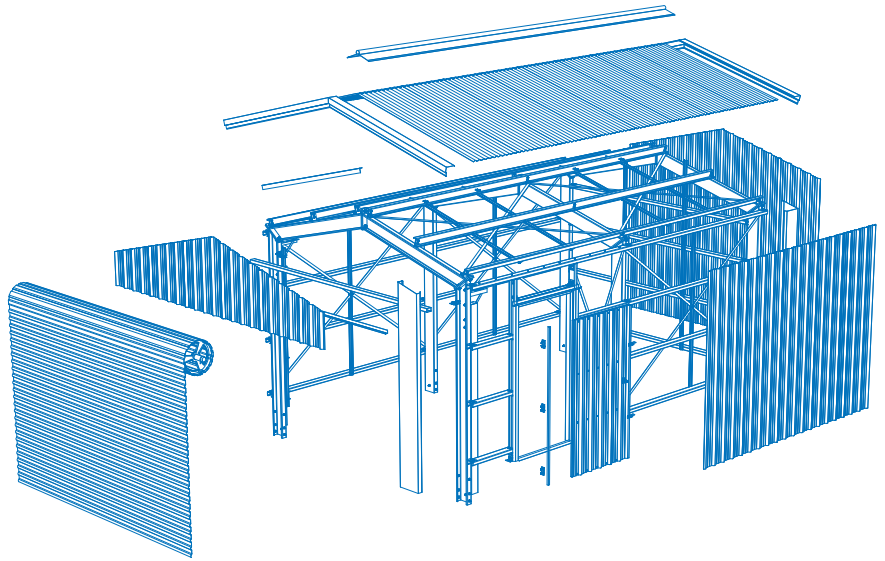

Stratco Cyclonic (Region C) - 3.0m Height

| Size | Width (mm) Overall * | Length (mm) Overall * |
|------|-------------------------|--------------------------|
| CGH1 | 6170 | 6135 |
